

About the Workshop

When: August 4, 2010, St. Louis, MO, 8:30 – 4:30

Where: St. Louis, MO. Conveniently scheduled the day after IAMLUG. You're already there, so why not stay another day and dive deep into something new?

Who: Lotus Notes/Domino developers who have not done any XPages development. We'll start at the beginning and aim to have you ready to go back to the office ready to start an XPages project. As long as you know how to create a Form and a View, you'll be OK!

Requirements: This is a "bring your own laptop" course. You should have Domino Designer 8.5.1 installed on your own machine so you can get used to working with XPages in your own environment.

What you'll learn:

In a busy eight hours, you're going to create an entire application! You'll experience the following elements of XPage development:

- Data Binding for Forms
- Data Binding for Views
- Themes and UI Design
- Custom Control design
- Type Ahead and simple Form Validation
- Building dynamic HTML using Repeat Controls
- Server Side JavaScript
- And a whole lot more...

How Much?

The price is an attractive \$595 if you register for the course on a standalone basis. For IamLUG attendees, you will receive a special discount and pay only \$495. We expect this seminar to fill to capacity, so act now to reserve your spot!

What previous attendees have said:

- "A real eye opener for me as I've not looked at XPages prior to the course."
- "Excellent value for money. Pitched just right for the first steps into XPages."
- "It gave me a very good understanding of XPages under the bonnet."
- "It was great being here, great course, the XPages start I was looking for."
